
(a) One real token: 196 of the 256 features one pass keeps, the other drops (Jaccard 0.133)
μ (deterministic)
pass 1: selected
pass 2: selected
selected by one pass only
rank k = 256: the last one
Top-k keeps without noise
pre-activation (×10⁻³)
feature's rank by μ for this token
(b) Where churn happens, 8,192 tokens
training regime: Jaccard 0.11
as saved (raw acts): Jaccard 0.87
P(selected by one pass only)
feature's rank by μ (log)
(c) Measured scales
k-th/(k+1)-th gap, converged TopK
median
max
99th pct.
≳ 80 ×
noise scales in the sweep
clamp floor
σ = 0.0498
scale (training space, log)
